Professional Summary

Workflow and process designer for teams adopting AI. Nine years building automated programs for segmented audiences, four and a half of them inside Gainsight. Today I help a 50-plus CSM organization work more efficiently: centralizing internal knowledge, eliminating silos between teams, and teaching people to use AI in the work they do every day. The pattern I build to: architect the logic once at design time, keep everything that changes in a grounding source the system reads from, and let runtime be the easy part. I've retired AI workflows that didn't hold up, cleared AI tooling through legal and information security at a threat intelligence company, and rebuilt a plan when security ruled out the first version. Gainsight NXT Level 2 certified, two consecutive terms on the Gainsight CS Ops Product Council, two-time Platinum Gainstar. Psychology degree underneath it all: audience segmentation and behavioral design are the foundation.

Core Skills

Workflow and Process Design: Current-state workflow mapping and end-to-end redesign; translating a business problem into written requirements and success criteria a technical team can build against; prioritization and sequencing across functions; adoption measurement (time returned, usage that holds) and retiring what doesn't earn its place; reusable patterns, templates, and libraries over one-off builds; change management and stakeholder alignment; cross-functional partnership with business intelligence, data, Salesforce administration, legal, and information security

AI Enablement: Design-time versus runtime architecture (build the logic once, let a deterministic system execute it); human review as a design constraint, not a courtesy; ops-mediated tool access and permissioning models; grounding generation in an approved source of truth; model selection and cross-model chaining by task and cost; context, prompt, and skill architecture; maintainability as a build requirement. Practice write-up: daynwj.github.io/ai

AI Tooling: Claude (Projects, Skills, scheduled tasks, MCP connectors), Microsoft Copilot and SharePoint Copilot, Copilot Studio, Gemini (custom Gems, Deep Research), Gemini Notebook (formerly NotebookLM), Granola, Perplexity

Knowledge and Governance: Knowledge systems (SharePoint, Microsoft Loop, Notion): database and schema design, wikis, forms, dashboards, infographics, SOPs; documentation and naming conventions; software evaluation through legal and security review; data-handling and permissioning review; project planning

Digital and Scaled Customer Success: Digital-led and scaled CX journeys, lifecycle campaign design and audience segmentation, tech-touch and pooled coverage models, B2H ("business-to-human") communication design, message and cadence testing, CSM enablement

Gainsight: NXT Level 2 certified. Gainsight CS: Journey Orchestrator (Dynamic and Advanced JOs, audience filters), Data Designer, Health Scores, CTAs and Playbooks, Gainsight Copilot, Surveys, Reports and Dashboards. Gainsight CC (Customer Communities): community integrated with CS lifecycle programs.

Platforms and Tools: Gainsight, Salesforce, Domo, Notion, SharePoint, Google Workspace, Microsoft 365, Slack, Jira, Atlassian Rovo, Confluence, Smartsheet, Airtable, Adobe (Photoshop, Illustrator), HTML. Email platforms: Eloqua, Listrak, Braze, Klaviyo

Professional Experience

Staff Customer Success Communications and Content Manager

Henry Schein One · Customer Success Operations · Dental Practice Management SaaS · Remote · January 2026 – Present

- Help a 50-plus CSM organization work more efficiently. Joined to run Journey Orchestrator programs and customer enablement communications, and the role grew into CS operations: centralizing internal knowledge, building reporting, and rolling out AI tools that help CSMs prepare for calls. Partner with Salesforce administration and BI on the upstream data layer.
- Retired a business-review prep prompt I'd shipped to the Gainsight Copilot library. Formatting varied run to run, talking points dropped out, and CSMs were re-prompting to get a complete script. It was making their job harder, so I pulled it. I ran the CSMs' talking-point script through Claude to turn it into logic gated on product, version, and feature use, with talking points and concern responses for each outcome. Our BI partner loaded that logic into Domo next to each account's usage data, so a CSM searches an account and gets the same talking points every time. AI does its work at design time; everything is locked in place at runtime. Leadership estimates prep dropped from over an hour to 15–30 minutes.
- Rerouted an AI build when security ruled out the version I'd planned. The original design was a Copilot Studio agent with a live connection into Gainsight; security declined MCP, outside connections, and custom agents. Account questions now go to Gainsight's own Copilot, supported with saved prompts and key definitions, and everything else runs on a declarative Microsoft Copilot agent grounded in SharePoint, on an LLM security had already cleared.
- Pitched Notion as the CS Ops knowledge system and lost, then built it in SharePoint with licenses the org already held. The original ask was an SOP navigator, but the SOPs sat in an Excel list only premium Copilot users could search, inside an ungoverned document library. I restructured the CS SharePoint site into governed libraries (enablement guides and files; team call recordings) plus a product reference link list, used Copilot in SharePoint to write keyword-dense descriptions for every file, and kept the structure flat with metadata. The agent returns the steps and a direct link to the source document, or a content request form when no SOP exists yet.
- Built the content system for the Microsoft 365 Copilot rollout, scoped up from a one-page tip-sheet request: session deck, setup guide, best practices guide, starter prompt pack, full prompt library, and a personalization interview prompt that drafts each CSM's custom instructions. Use cases run at 100, 200, and 300 levels so teammates move from beginner to advanced prompts.
- Designed the weekly CS Ops reporting workflow. Copilot writes the Jira query, Atlassian Rovo pulls the tickets, and Copilot checks the results against the team's meetings and Domo metrics before building the infographic for director-level reporting. The workflow cut prep from half a day to 15–20 minutes.

- Built the standing coverage model that gives P2 and P3 accounts a self-service path instead of a CSM touchpoint. Several hundred accounts handle new payment terminal orders and compliance requirements on their own, with a request-a-CSM option in every send. Under 10% ask for one, so the coverage runs without adding CSM headcount.
- Build Journey Orchestrator programs end to end, including most of the migration onboarding programs, which send newly migrated customers eight emails, one a week. Stakeholders request the program and teammates write the copy; I build the audience and program logic, map and test every send, review with stakeholders, and schedule the launch.

Senior Email Operations Specialist

Recorded Future · Client Enablement · Threat Intelligence / Cybersecurity · Remote · January 2022 – January 2026 · Promoted from Email Campaign Specialist, November 2024

- Built the lifecycle and engagement programs that customer success, onboarding, training, product, and support ran on, working from inside the client enablement team, and partnered with marketing on shared audiences. The November 2024 promotion moved me from building programs to planning them.
- Rolled out Gainsight's Slack AI agent to the CSM team, replacing a notification-only app. Piloted with a group under ten before releasing to the full team. Access inherited each rep's Salesforce permissions, so a CSM saw only their own book and a manager saw what rolled up to them, with no second permission model to maintain. Clearing legal and security meant working with Gainsight's product team to confirm a wildcard operator that confined the agent to DMs and kept it out of every public and private channel. That detail was added to their public FAQ.
- Migrated legacy batch-and-blast email into behavior-triggered Journey Orchestrator programs running on real-time data. Tripled new-user webinar registrations by replacing a mass onboarding email with personal invitations sent on behalf of the trainers to every user in their first 30 days.
- Built Gemini Gems for myself and our digital program manager, including a copywriting Gem trained on more than 200 of her emails (our tone, our audience, their pain points) and an HTML email reviewer that flags formatting problems and suggests fixes.
- Built the 210-day pre-renewal program that convened the CSM, account executive, renewal rep, and executive sponsor well ahead of the renewal date. The point was coordination: give the renewal team a full account picture early enough to act on it.
- Ran a monthly check-in program sent on behalf of each CSM, with versions by product and a new workflow featured in each send. Customers replied to their CSM to say thanks, and CSMs only had to write a new workflow every few months. Click-to-open reached 47%, and a smaller Japanese-language send with a translated version peaked at 67%.
- Ran A/B tests on tone and timing. On inactivity notices sent before a user lost access at 210 days, friendly "we miss you" copy drew significantly more engagement than formal copy. On onboarding emails, a 3-day delay beat 7 days and became the standard. The results shaped the B2H approach I still build with.

Email Marketing Specialist

Rugs.com (Unique USA Inc) · Charlotte, NC / Remote · January 2021 – December 2021

- Produced 14+ campaigns weekly across audiences up to 1.9M, managing variants for a 1.1M+ subscriber list. Migrated the email stack from Listrak to Braze to Klaviyo inside a single year, executing IP warming through each cutover.

Change Communications Specialist (Business Initiatives Consultant II)

Wells Fargo · Charlotte, NC / Remote · December 2019 – December 2020

- Ran day-to-day change communications for the replacement of badge-entry security gates across company buildings, including building-by-building rollout emails and slide decks for leadership.

Manager, Marketing

Quest Oracle Community · Lexington, KY / Remote · September 2017 – September 2019

- As the internal Eloqua expert, built 20–30 technical and continuing-education email programs monthly for a 65K+ member community, including JD Edwards user groups and events, reaching C-level and end-user audiences. Built campaigns and canvases alongside third-party Eloqua consultants.

Communications Manager

Silver Springs Stud / Margaux Farm · Kentucky · March 2009 – August 2017

- Led marketing, communications, and early digital and media operations for Kentucky Thoroughbred horse farms.

Community and Thought Leadership

- **Gainsight CS Ops Product Council (2025 and 2026 terms)**: selected two consecutive years to advise Gainsight on product development alongside admins from enterprise SaaS organizations.
- **Two-time Platinum Gainstar**: second-highest point total community-wide in 2026, and one of six members at Platinum tier (US-based). Recognized on stage at Gainsight Pulse (2026, Las Vegas).
- **Gainsight Pulse Academy Live presenter (2025, Las Vegas)**: combining Data Designer templates and broad audiences with Dynamic Journey Orchestrator audience filters for standardization and precision targeting at scale.
- **Gainsight Gamechanger Community**: VIP contributor; author of a published Journey Orchestrator best-practices article series.
- **AI in Post-Sale Council (Rod Cherkas)**: contributor to the AI Playbook Vault; pre-reviewer on his book.
- **Global Gainsight Admin (GGA) Slack**: active practitioner contributor.

Education and Certifications

- Gainsight NXT Certifications (Level 2)
- Lean Six Sigma White Belt, Henry Schein Center of Business Excellence
- B.A., Psychology, Transylvania University, Lexington, KY
