Professional Summary

Workflow and process designer for teams adopting AI. Nine years redesigning how work gets done for segmented audiences at scale, four and a half of them inside Gainsight, and today the owner of the AI-enablement and intelligence function for a 50-plus CSM organization. The pattern I build to: architect the logic once at design time, keep everything that changes in a grounding source the system reads and writes back to, and let runtime be the easy part. I have shipped AI workflows that did not hold up and retired them, cleared AI tooling through legal and information security at a threat intelligence company, and rerouted a build when the access I wanted was not available. Gainsight NXT Level 2 certified, two consecutive terms on the Gainsight CS Ops Product Council, two-time Platinum Gainstar. Psychology degree underneath all of it — adoption is a behavior problem before it is a tooling problem.

Core Skills

Workflow and Process Design: Current-state workflow mapping and end-to-end redesign; translating a business problem into written requirements and success criteria a technical team can build against; prioritization and sequencing across functions; adoption measurement (time returned, usage that holds) and retiring what does not earn its place; reusable patterns, templates, and libraries over one-off builds; change management and stakeholder alignment; cross-functional partnership with business intelligence, data, Salesforce administration, legal, and information security

AI Enablement: Design-time versus runtime architecture (build the logic once, let a deterministic system execute it); human review as a design constraint, not a courtesy; ops-mediated tool access and permissioning models; grounding generation in an approved source of truth; model selection and cross-model chaining by task and cost; context, prompt, and skill architecture; maintainability as a build requirement. Practice write-up: daynwj.github.io/ai

AI Tooling: Claude (Projects, Skills, scheduled tasks, MCP connectors), Microsoft Copilot and SharePoint Copilot, Copilot Studio, Gemini (custom Gems, Deep Research), Gemini Notebook (formerly NotebookLM), Granola, Perplexity

Knowledge and Governance: Knowledge systems (SharePoint, Microsoft Loop, Notion): database and schema design, wikis, forms, dashboards, infographics, SOPs; documentation and naming conventions; software evaluation through legal and security review; data-handling and permissioning review; project planning

Digital and Scaled Customer Success: Digital-led and scaled CX journeys, lifecycle campaign design and audience segmentation, tech-touch and pooled coverage models, B2H ("business-to-human") communication design, message and cadence testing, CSM enablement

Gainsight: NXT Level 2 certified. Gainsight CS: Journey Orchestrator (Dynamic and Advanced JOs, audience filters), Data Designer, Health Scores, CTAs and Playbooks, Gainsight Copilot, Surveys, Reports and Dashboards. Gainsight CC (Customer Communities): community integrated with CS lifecycle programs.

Platforms and Tools: Gainsight, Salesforce, Domo, Notion, SharePoint, Google Workspace, Microsoft 365, Slack, Jira, Atlassian Rojo, Confluence, Smartsheet, Airtable, Adobe (Photoshop, Illustrator), HTML. Email platforms: Eloqua, Listrak, Braze, Klaviyo

Professional Experience

Staff Customer Success Communications and Content Manager

Henry Schein One • Customer Success Operations • Dental Practice Management SaaS • Remote • January 2026 – Present

- Own the AI-enablement and intelligence function for a 50-plus CSM organization: the AI workflows the team runs on, the Journey Orchestrator architecture underneath the customer-facing side, and the knowledge system both read from. Partner with Salesforce administration and business intelligence on the upstream data layer.
- Retired a business-review prep prompt I had shipped to the Gainsight Copilot library. Formatting varied run to run, talking points dropped out, and CSMs were re-prompting to get a complete script — it was making their job harder, so I pulled it. Rebuilt it with our BI and data teams as a self-service Domo dashboard, moving the AI work to when the script is designed rather than when it runs. A CSM enters an account and gets the same complete output every time. Prep dropped from an hour-plus to 15–30 minutes.
- Rerouted an AI build rather than stalling it when the access I asked for was not available. I wanted a Copilot Studio agent with a live line into Gainsight and could not get MCP access into Microsoft Copilot. Account questions now route to Gainsight's own Copilot, which already reaches that data and required no new approval; everything else runs on declarative Microsoft Copilot agents grounded solely in SharePoint knowledge libraries — call recordings, SOPs, product links — on an LLM security had already cleared. The agents cannot reach Gainsight or Salesforce and do not need to. CSMs got working cross-system search out of the constraint.
- Pitched Notion as the CS Ops knowledge system and lost. Stood the system up on SharePoint instead, using licenses the org already held: a governed document library holding only approved current files, metadata tagging and filtered views throughout, and a centralized SOP list. A Copilot agent sits on top, so a CSM asking how to run a license transfer gets the SOP, the enablement recording, and the infographic together. No net-new vendor, no additional security review, no per-seat AI spend.
- Built the content system for the Microsoft 365 Copilot rollout to a 50-plus CSM organization: the session deck, a starter prompt pack, and a 100/200/300 reference for Teams, Outlook, Word, Excel, and PowerPoint, scoped up from a one-page tip-sheet request. License and admin-enablement gates are flagged at the level they apply.
- Wrote a personalization interview prompt that drafts each CSM's custom instructions, marks what it cannot verify as NEEDS INPUT, and never saves itself. Every enablement asset runs through a source-of-truth pipeline: vendor-documented research, a governed knowledge doc, and an audit pass before release.

- Designed the weekly CS Ops reporting workflow, replacing a manual status email. Microsoft Copilot prompts normalize the team's Jira and Loop entries into a fixed schema (wins, blockers, on-track status, program metrics, roadmap), then render an HTML infographic. Prep dropped from half a day to 15–20 minutes, and it feeds director-level reporting.
- Built the standing coverage model that gives P2 and P3 accounts a self-service path instead of a CSM touchpoint. Several hundred accounts now handle replacement terminal orders and compliance requirements on their own, with a request-a-CSM option in every send. Under 10% ask for one, freeing capacity without new headcount. Shipped as a project, designed to repeat, running as ongoing coverage since.
- Built 7 of the 16 Journey Orchestrator programs running in production, mostly lifecycle, and own triage when one stops firing. Onboarding and adoption programs drive registration for new-user office hours.

Senior Email Operations Specialist

Recorded Future · Client Enablement · Threat Intelligence / Cybersecurity · Remote · January 2022 – January 2026 · Promoted from Email Campaign Specialist, November 2024

- Built the lifecycle and engagement programs that customer success, onboarding, training, product, and support ran on, working from inside the client enablement team. Partnered with marketing on shared audiences and channel ownership.
- Rolled out Gainsight's Slack AI agent to the CSM team, replacing a notification-only app. Piloted with a group under ten before releasing to the full team. Access inherited each rep's Salesforce permissions, so a CSM saw only their own book and a manager saw what rolled up to them — no second permission model to maintain. Clearing legal and security meant working with Gainsight's product team to confirm a wildcard operator that confined the agent to DMs and kept it out of every public and private channel. That detail was added to their public FAQ.
- Migrated legacy batch-and-blast email into behavior-triggered Journey Orchestrator programs running on real-time data. New-user activation reached a 47% click-to-open rate against a ~20% industry baseline; regional segmentation peaked at 67% CTOR, roughly 3x the global average. Re-architected webinar link and registration flows, tripling registrations.
- Created Gemini agentic workflows ("Gems") for task orchestration, brand-aligned copywriting, and technical link extraction, before AI tooling was part of the team's remit.
- Built the 210-day pre-renewal program that convened the CSM, account executive, renewal rep, and executive sponsor well ahead of the renewal date. The point was coordination: give the renewal team a full account picture early enough to act on it.
- Ran a monthly check-in program on behalf of the CSM team. Scaled sends landed as personal outreach from each CSM, and customers replied directly to their rep. Partnered with CSMs on onboarding and feature-announcement campaigns, tuning content and cadence to what they were hearing from accounts.
- Ran structured A/B testing on message tone and send cadence: friendly versus formal copy, 3-day versus 7-day send delays, retiring the underperformer after each test window. Results drove the move to the shorter delay and shaped the B2H approach I still build with.

Email Marketing Specialist

Rugs.com (Unique USA Inc) · Charlotte, NC / Remote · 2021

- Produced 14+ campaigns weekly across audiences up to 1.9M, managing variants for a 1.1M+ subscriber list. Migrated the email stack from Listrak to Braze to Klaviyo inside a single year, executing IP warming through each cutover.

Change Communications Specialist (Business Initiatives Consultant II)

Wells Fargo · Charlotte, NC / Remote · 2019 – 2020

- Drove enterprise change communications across large-scale business initiatives.

Manager, Marketing

Quest Oracle Community · 2017 – 2019

- As the internal Eloqua expert, built 20–30 technical and continuing-education email programs monthly for a 65K+ member community reaching C-level and end-user audiences. Segmented the contact database and planned campaigns and canvases with third-party Eloqua consultants.

Communications and IT / Media Manager

Silver Springs Stud / Margaux Farm · 2009 – 2017

- Led marketing, communications, and early digital and media operations for Kentucky Thoroughbred businesses.

Community and Thought Leadership

- **Gainsight CS Ops Product Council (2025 and 2026 terms)** — selected two consecutive years to advise Gainsight on product development alongside admins from enterprise SaaS organizations.
- **Two-time Platinum Gainstar** — second-highest point total community-wide in 2026, and one of six members at Platinum tier (US-based). Recognized on stage at Gainsight Pulse (2026, Las Vegas).
- **Gainsight Pulse Academy Live presenter (2025, Las Vegas)** — on combining Data Designer templates and broad audiences with Dynamic Journey Orchestrator audience filters for standardization and precision targeting at scale.
- **Gainsight Gamechanger Community** — VIP contributor; author of a published Journey Orchestrator best-practices article series.
- **AI in Post-Sale Council (Rod Cherkas)** — contributor to the AI Playbook Vault; pre-reviewer on his book.
- **Global Gainsight Admin (GGA) Slack** — active practitioner contributor.

Education and Certifications

- Gainsight NXT Certifications (Level 2)
- Lean Six Sigma White Belt — Henry Schein Center of Business Excellence
- B.A., Psychology — Transylvania University, Lexington, KY
